

PROFILE & HIGHLIGHT OF SKILLS

Software Engineering Co-op Student specializing in Game Programming (GPA: 4.4/4.5) with 3+ years of IT infrastructure, data center technician support, and systems implementation experience. Proficient in C#, GML, Lua, C++, Java, Python, and SQL, with experience in Unity, GameMaker, and custom 2D/3D graphics pipelines. Proven track record in rapid prototyping, winning top placements in competitive game jams. Strong leadership and operational background, managing cross-functional teams, inventory logistics, and high-stress crisis resolution.

TECHNICAL SKILLS

Languages: C#, GML, Lua, C++, Java, Python, SQL, JavaScript, HTML, CSS  
Systems & Tools: Unix/Linux OS, Oracle SQL, MySQL, Node.Js, React, Nginx, VS Code, Rack Architecture, Git, Network & Satellite Communications  
Game Development: Unity, GameMaker, Blender, Gimp, 2D/3D Asset Pipeline, UX/UI Design, Tilemaps, Shaders, Trello, Codecks

ACADEMIC PROJECTS

|                                                                                                                                                                                                                                                                            |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>RELATIONAL DATABASE SYSTEM   CENTENNIAL COLLEGE PROJECT</b>                                                                                                                                                                                                             |
| Architected and implemented a normalized Oracle SQL database system, translating stakeholder requirements and business rules into structured ERD models. Validated system integrity by executing optimized multi-table queries to manipulate and retrieve relational data. |
| <b>MULTI-NODE LINUX SERVER INFRASTRUCTURE   CENTENNIAL COLLEGE PROJECT</b>                                                                                                                                                                                                 |
| Configured and deployed a three-node Linux virtual machine infrastructure featuring Nginx load balancing, MySQL database management, automated cross-server file transfers via Samba, and customized firewall security protocols.                                          |
| <b>2D ACTION WEB GAME   CENTENNIAL COLLEGE PROJECT</b>                                                                                                                                                                                                                     |
| Engineered a 2D browser-based action game in JavaScript, HTML5, and CSS, with my own pixel art assets, implementing custom collision detection, wave spawning logic, and dynamic entity drops.                                                                             |

WORK EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                |                                     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------|
| <b>NIGHTCREW MANAGER</b>                                                                                                                                                                                                                                                                                                                       | <b>Nofrills 2023 – 2025</b>         |
| Managed end-to-end night operations, responsible for staff workflow, high-volume inventory intake, invoice accuracy, and reorganizing physical inventory space to ensure stock availability and operational efficiency.                                                                                                                        |                                     |
| <b>JUNIOR BROADCAST ENGINEER</b>                                                                                                                                                                                                                                                                                                               | <b>Nextologies Ltd. 2019 – 2022</b> |
| Architected compact data center infrastructure for a high-priority international satellite reception site in Hong Kong. Successfully managed and executed an antenna heating project, meeting strict budget and timeline constraints to maintain continuous hardware operation.                                                                |                                     |
| <b>GROCERY MANAGER</b>                                                                                                                                                                                                                                                                                                                         | <b>Nofrills 2016 – 2019</b>         |
| Managed core operational logistics, overseeing store opening and closing procedures, purchase order processing, vendor deliveries, and daily team workflows. Demonstrated critical incident resolution, calmly de-escalating customer conflicts, handling theft incidents, and dynamically resolving sudden staffing shortages under pressure. |                                     |

## GAME DEVELOPMENT

[ITCH.IO](#)[YOUTUBE](#)[INSTAGRAM](#)

---

### FARMING GAME | SOLO DEVELOPMENT

CURRENT

Developing and marketing a full-featured 2D pixel-art farming simulation in GameMaker, engineering custom grid tilemap serialization, core systems, UI menus, and interactive mechanics. Producing all aspects of production and growth, independently creating original pixel art, audio composition, narrative writing, and active devlog marketing across social channels.

### OPENGL & C++ | PERSONAL STUDIES

CURRENT

Engineered custom 2D/3D rendering experiments in C++ and OpenGL, building experience with core graphics pipelines, shader implementation, camera matrices, and low-level system programming.

### UNCRANK'D PRE-SUMMER GAME JAM | 4<sup>TH</sup> PLACE OVERALL

2026

Co-designed, programmed, and illustrated an award-winning Playdate game in Lua within a one-week game jam, utilizing the console's unique mechanical crank hardware and earning a magazine feature and physical book prize.

### CENTENNIAL COLLEGE FALL GAME JAM | 2<sup>ND</sup> PLACE OVERALL

2025

Participated in a 48-hour game jam by co-developing a playable 2D game in Unity—contributing to C# code, menu UI, and world map design while creating all original art assets and managing the Itch.io release.

### BRACEY'S GAME JAM | 25<sup>TH</sup> PLACE FOR AUDIO

2025

Achieved top 25% placement overall out of 2200+ entries and 25th in Audio as a solo developer in a global week-long game jam, producing the game's code, custom sound design, narrative writing, and pixel art.

## INTERESTS

---

### CREATIVE ARTS & WRITING

Author of original novellas, children's stories, and poetry; traditional painting and illustration.

### MEDIA & MUSIC

Multi-instrumentalist; game development devlog creation, video editing, and nature photography.

### CRAFTING & OUTDOORS

Woodworking and hands-on building; active backcountry camping, hiking, and outdoor exploration.

### GAME CULTURE

Tabletop and digital gaming, game design theory, and solo game development.
